Applicant's amendment dated March 17, 2008, has been fully considered.

Applicant has amended the claims to include the specific ratio of depth over wave length to overcome the rejection. However, a new ground of rejections has been made based on a newly discovered reference from further searches.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 11-15 are rejected under 35 U.S.C. 102(e) as being anticipated by US 7023104 (Kobashikawa et al).

Kobashikawa et al discloses an impulse-type motor of a power plant being located at the water depth with the ratio D/L approximately 1/2. Figures 5, 9, disclose many units mounted in parallel. The abstract discloses the system can be used to produce works, the base of the motor is attached to the base of the water base.

Regarding claim 15, the motor in Kobashikawa et al can be considered as piston pump.
